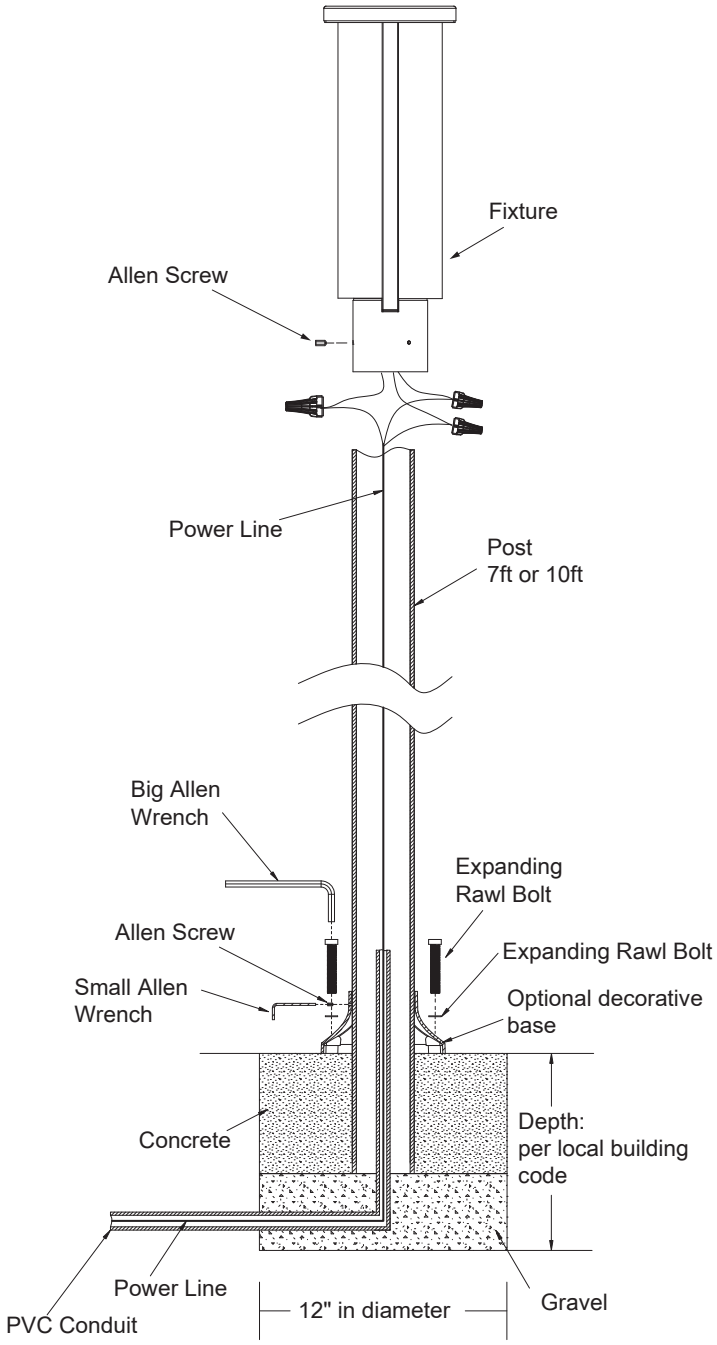
INSTALLATION INSTRUCTIONS

POST84 / POST120 (WITH OPTIONAL BASE1663)



Direct Burial Lamp Post Installaion Guide

Prior to installation

- Check with local authorities for location of utility lines (gas, elec., water) in area where hole is to be dug.
- Make sure all under ground-wiring has been installed according to local buliding codes.

Post installation

1. Dig a hole about 12" in diameter and check local building codes for depth.
2. Layer bottom of hole with 6" of gravel for drainage purpose.
3. Mark the post with a pencil up from its bottom so you'll know exactly how deep to plant it in the footing.
4. Place the lamp in center of the hole with stakes and twine support the hole in plum position.
5. Mix and pour the concrete per manufacturer's instructions. The concrete is aligned with the mark on the pole.
6. After confirming the post is plumb, apply a waterproof sealant around the base of the post where it meets the concrete. This sealing prevents water from seeping into the concrete and causing damage over time. It also helps to keep the post secure and stable.

If you choose a optional decorative base, secure it to the post with three allen screws, align its bottom with the mark on the post (before step4). Apply a waterproof sealant around the post where it meets the base, then insert the expanding rawl bolt into the wet concrete through the four holes on the base(after step 6).

Attach the fixture to the post

- Once the concrete has hardened, you can attach the fixture to the post. Follow the manufacturer's instructions for your specific lamppost model.
